Net Neutrality
...on a continuous basis...
NRAs should consider that, in order to identify attacks and activate security measures, the use of security monitoring systems by ISPs is often justified. In such cases, the monitoring of traffic to detect security threats (such as those listed in paragraph 84) may be implemented in the background on a continuous basis, while the actual traffic management measure preserving integrity and security is triggered only when concrete security threats are detected. Therefore, the precondition “only for as long as necessary” does not preclude implementation of such monitoring of the integrity and security of the network.
