

**RIPE NCC**  
RIPE NETWORK COORDINATION CENTRE

# WHOISTORY

Visualisation of historical  
WHOIS data

# WHOISTORY - what is it (not)?

- It's actually not a tool, but a Maltego add-on (local transform)
- It visualises historical WHOIS data from the RIPE database (IP addresses, AS, Maintainers, Organisations)
- Can help investigators to find relations between Internet resources
- Not an official RIPE NCC tool, but a PoC

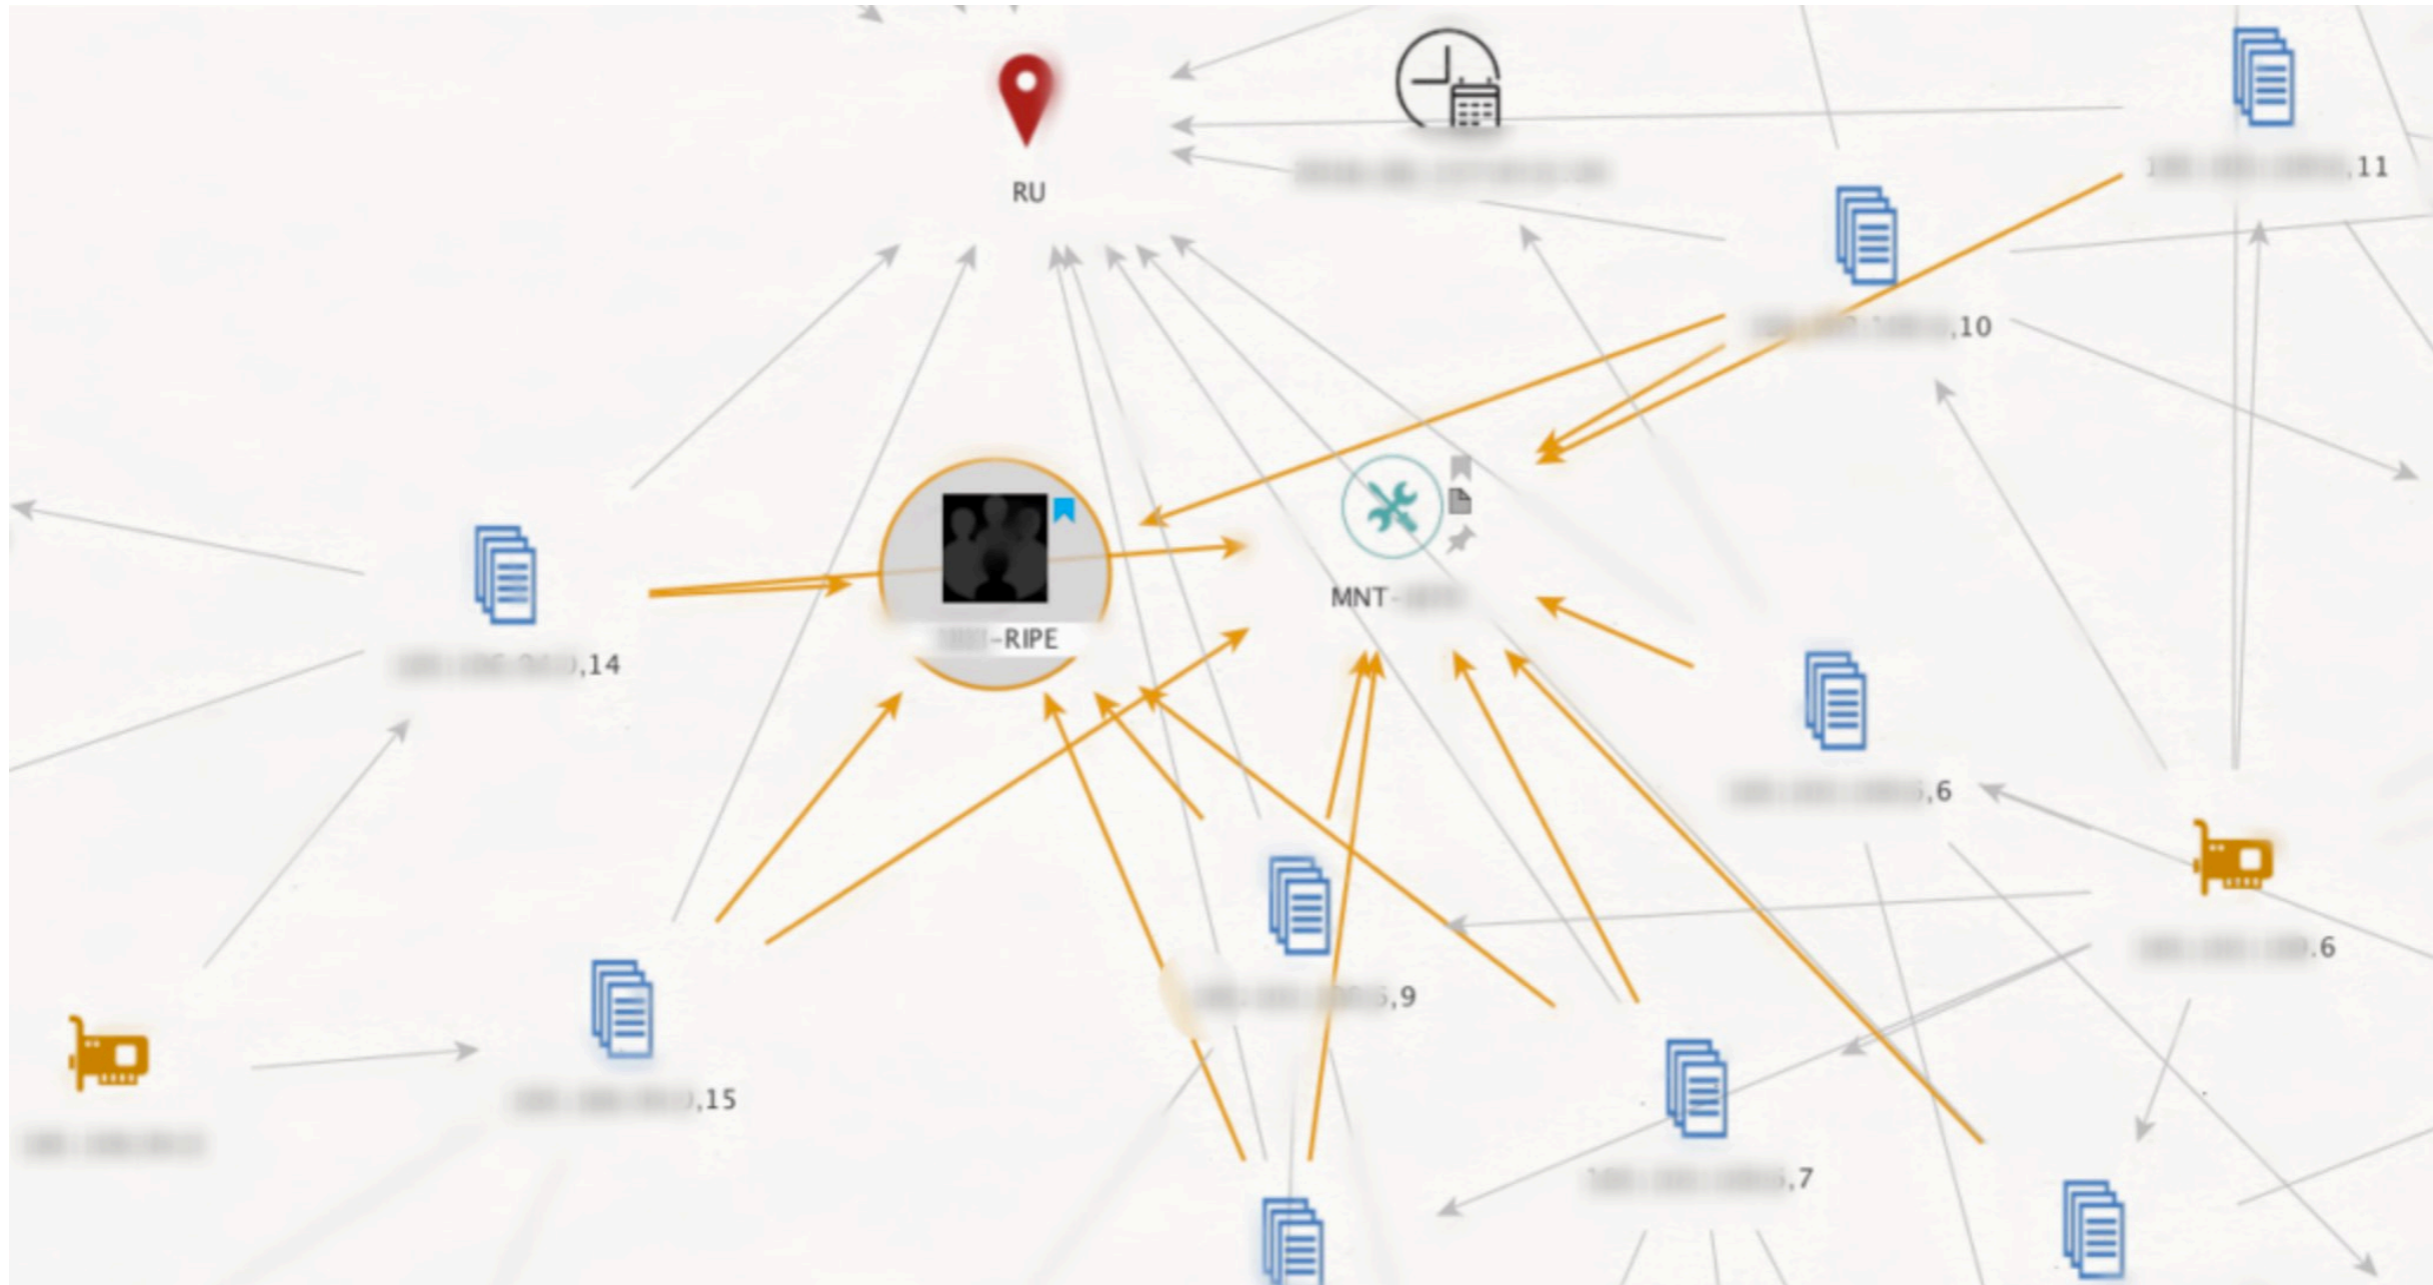

# Historical WHOIS data

# Historical WHOIS Records

# WHOISTORY in action

# WHOISTORY on GitHub

- <https://github.com/whoistory/>
- Python scripts
- Wiki contains installation & configuration instructions
- Prerequisite: Maltego (Classic)
- Future plans: add local transforms for APNIC, AFRINIC historical WHOIS data
